

Front-End Test

Instructions:

Code a Frontend page based on provided PSD file.

Please write clean HTML structure, CSS styles, and implement DRY principles as much as you feel comfortable while writing the code. When done, please share with us **the git repository of the whole project**.

Failing to do any of these will drastically lower your chances, please read carefully and ask for clarification if needed:

- The coded page needs to be pixel perfect, please use [Chrome's PerfectPixel](#) tool or a similar tool to achieve 90-99% design matching.
- SCSS is required.
- Responsive is required even though the design for it is not supplied, please use your best judgement to make the page fit nicely on all devices.
- When delivering, please make sure you supply all source code as well.
- Use the git during development, and when done, send us the git repository link.

The due date is 7 days from the moment when we send the test.

Specific details that have to be accomplished:

1. Header should be sticky and it should get a subtle drop-shadow on scroll.

2. Banner Slider

- On slide change, only textual part and watch on center need to be changed <http://prntscr.com/pq11ye> (animation is recommended)
- When slider arrows are hovered, the watch thumbnail from next/previous slide needs to be shown. <http://prntscr.com/pq146k>

3. Table Section

- Clicking anywhere on a Product row should open/close more info about a Product. <https://prnt.sc/qaahth>
- Clicking on the star icon should toggle a state of icon color. <https://prnt.sc/qaak4d>
- Clicking on outgoing icon should open a link (any url is ok) in a new tab. <https://prnt.sc/qaajkb>
- When a user selects something from a dropdown, a dropdown should close and selected value should append as a tag below. <http://prntscr.com/ppjgun>

- In table additional info when the user clicks on one of the small images lightbox needs to be shown. <http://prntscr.com/ppjhpa>
- When a user clicks on the ADD button, a clicked product needs to be appended to the sidebar, furthermore a "Total Sum" in sidebar and header should be updated <http://prntscr.com/pq1aei> . Number of products in the cart should also be updated and notification needs to be shown below cart icon in the header with information of product added in cart. <http://prntscr.com/ppjlg5>
- The sidebar opens when user clicks on the cart icon in the header.
- When user changes input value of product in the sidebar Total Sum needs to be updated <http://prntscr.com/ppjimp4>
- When user clicks on remove (X) button a product should be removed from the sidebar and Total Sum and number of products in cart should be updated.

4. Timeline

- Timeline slides by clicking on the arrows on the sides. <https://prnt.sc/qaae0x>
- Only on hover, the text box will transition to this state - <https://prnt.sc/qaaejm>
- Make sure the text box format is preserved, meaning content and layout shouldn't change during or after transitioning.
